

Hello.

Please read my requirements carefully. I don't want you to want to increase the budget afterwards. Examples are important for the decision.

A website is to be created in WordPress (see screens) – The design is finished – figma-file.

- There are 4 templates and 5 pages:
 1. Startpage (14 sections, including 2 slider sections, with 3 slides)
 2. Imprint and Terms&Conditions page (same template)
 3. Blog Overview
 4. Blog detail (Right column are text modules, no images. Left is Table of Contents.)
- Upper navigation, contact form and footer is the same on all pages.
- A point from the top navigation must be expandable (mouseover)
- The contact form must send a message with the contact information to us and the customer an acknowledgment of receipt.
- Table of Contents must be generated automatically (based on H2 headings)
- Yoast plugin needs to be installed
- The pages must end with .html (Wordpress setting)
- Nice animations (appearing of a button, elements falling in from the right or left of the screen - so it looks professional and nice).

- The page must be very fast (green) in pagespeed (mobile and desktop). All necessary settings must be made for this.
- If you upload images, they must be automatically reformatted in webp format.
- The system has to be uploaded to our server and it has to work afterwards (is also an important part of the tender).
- All images for the pages are supplied. You just have to tell me in which size and in which format (I'm assuming webp format). We can also deliver the whole page (also the individual pages) as SVG files.
- The site must be maintained by us.
- Design is done/finished and should not be changed (maybe in small points – if the website doesn't look good).
- Responsive of course
- SEO-Optimized
- Sitemap...

I hope I haven't forgotten.

Regards,

DS
